Come Hack Workshop

I hope this email
finds you

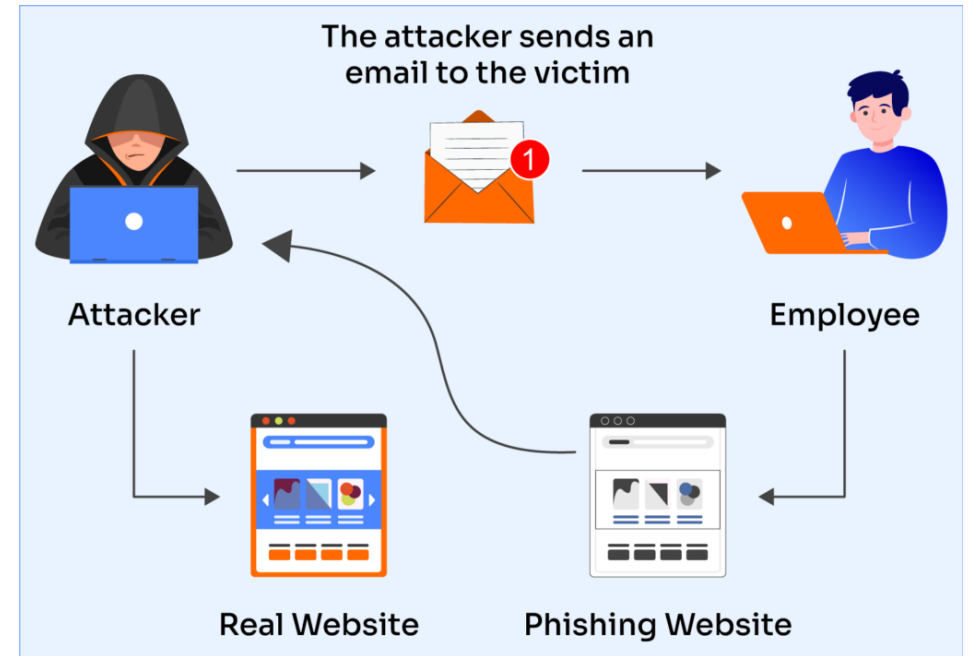

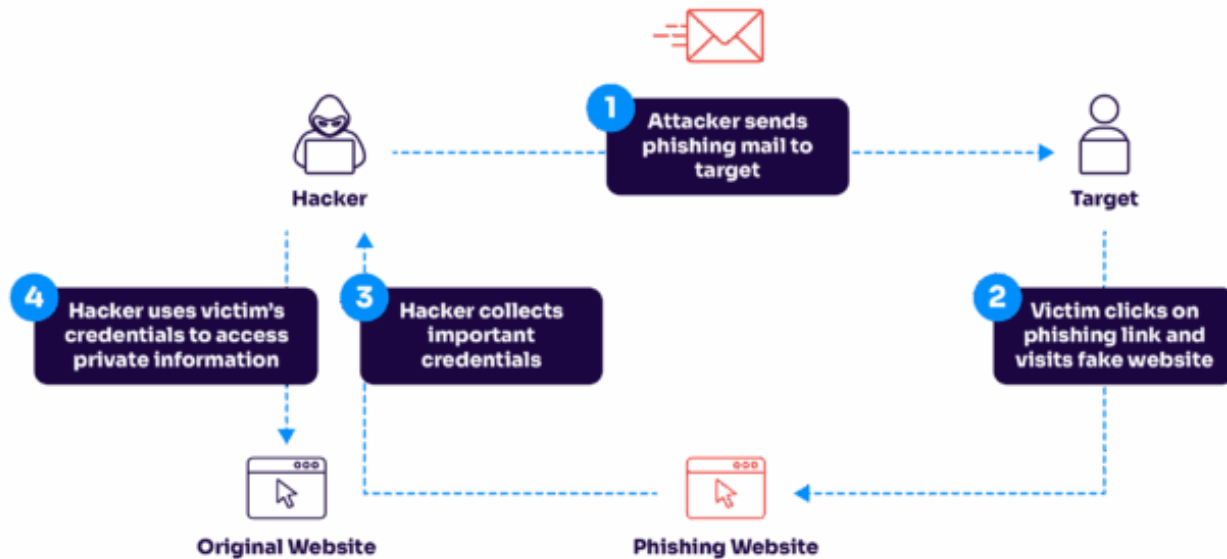

before I do.

What will be covered?

- Intro to phishing emails
- What is phishing?
- Ok. Why should I care?
- Ahhh. How can I spot one?
- Can we analyze it further?
- Can we try it ourselves?

Intro to phishing Emails

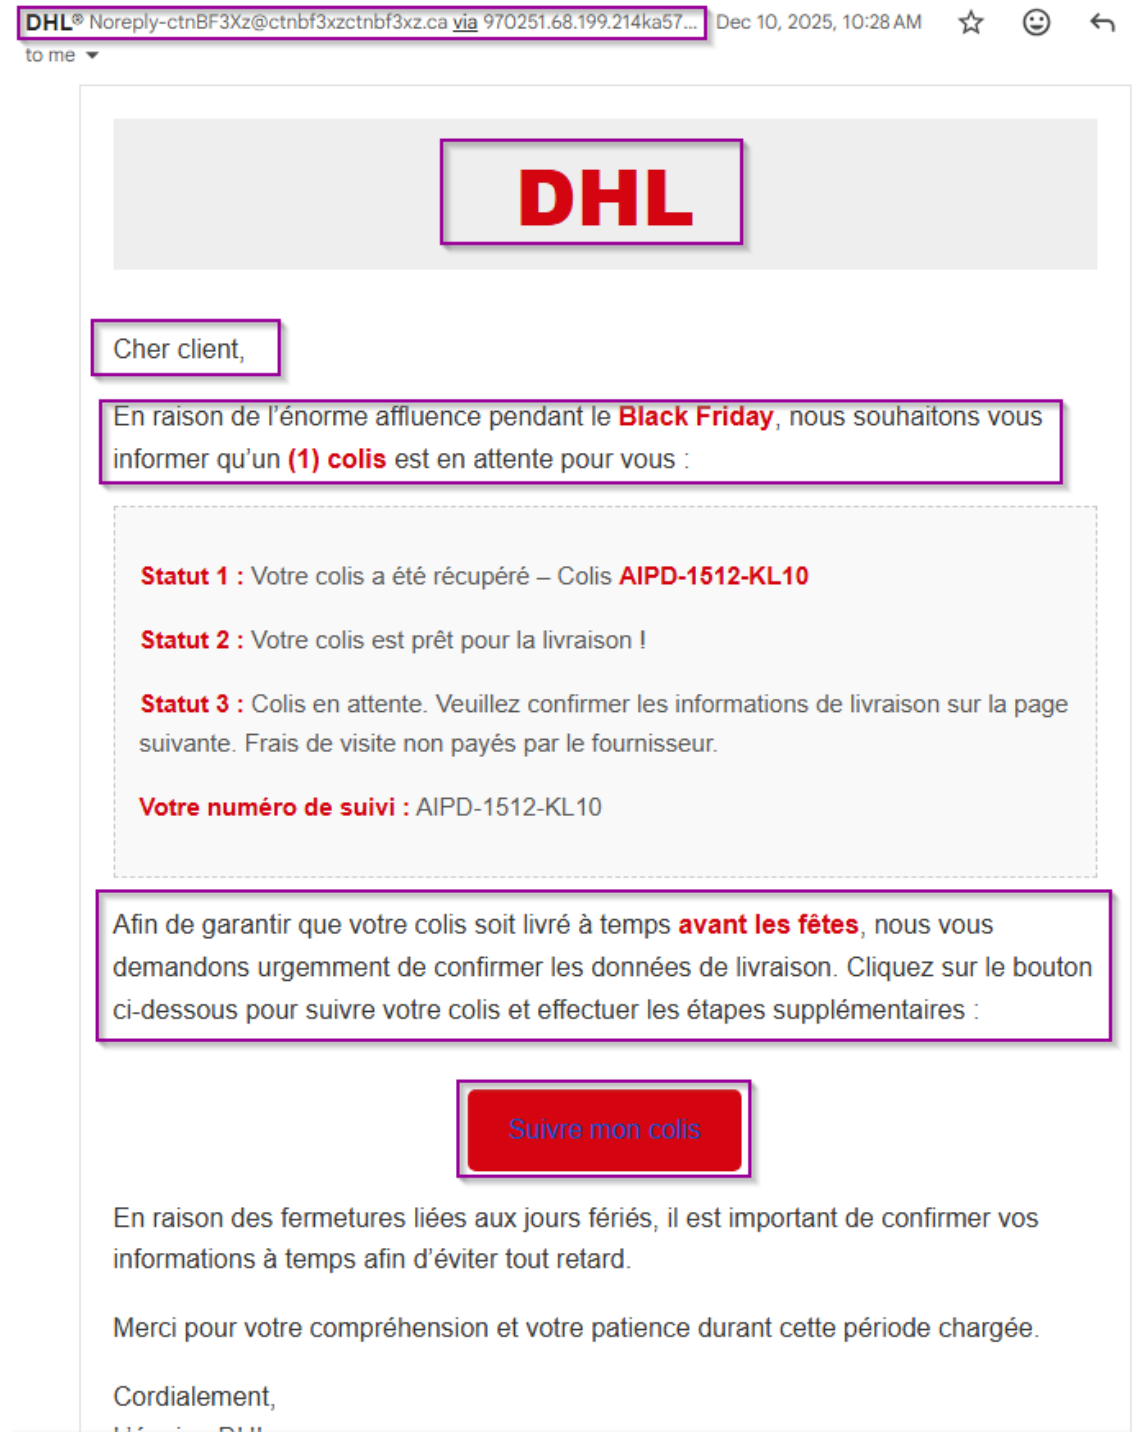

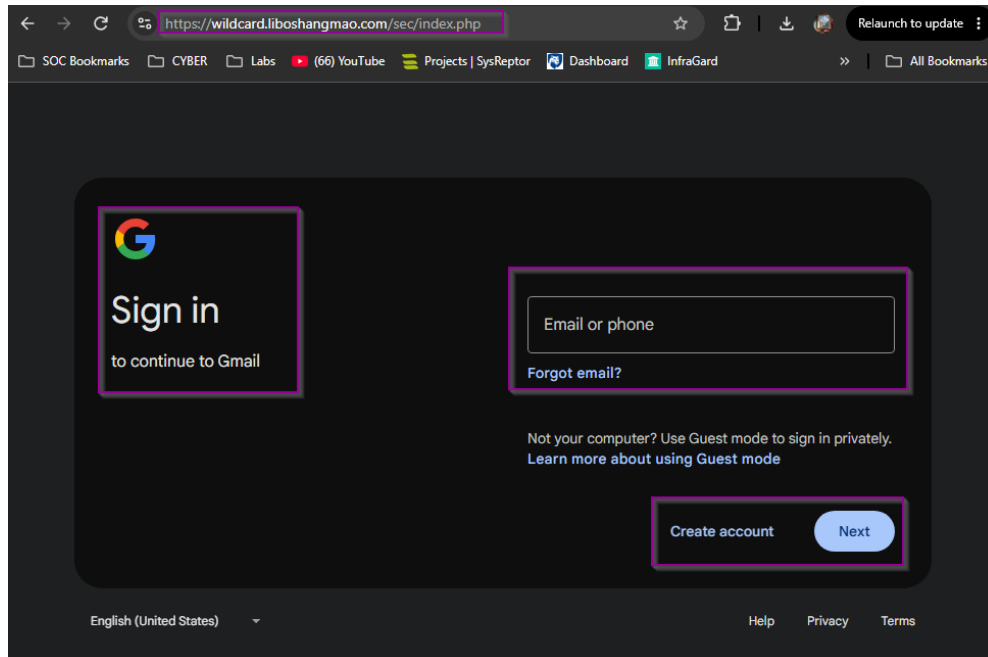

- Environment compromises are less often initiated by sophisticated attacks
- Attackers get login access through various social engineering methods
- They look for credentials, Authentication tokens, or session cookies...

What is phishing

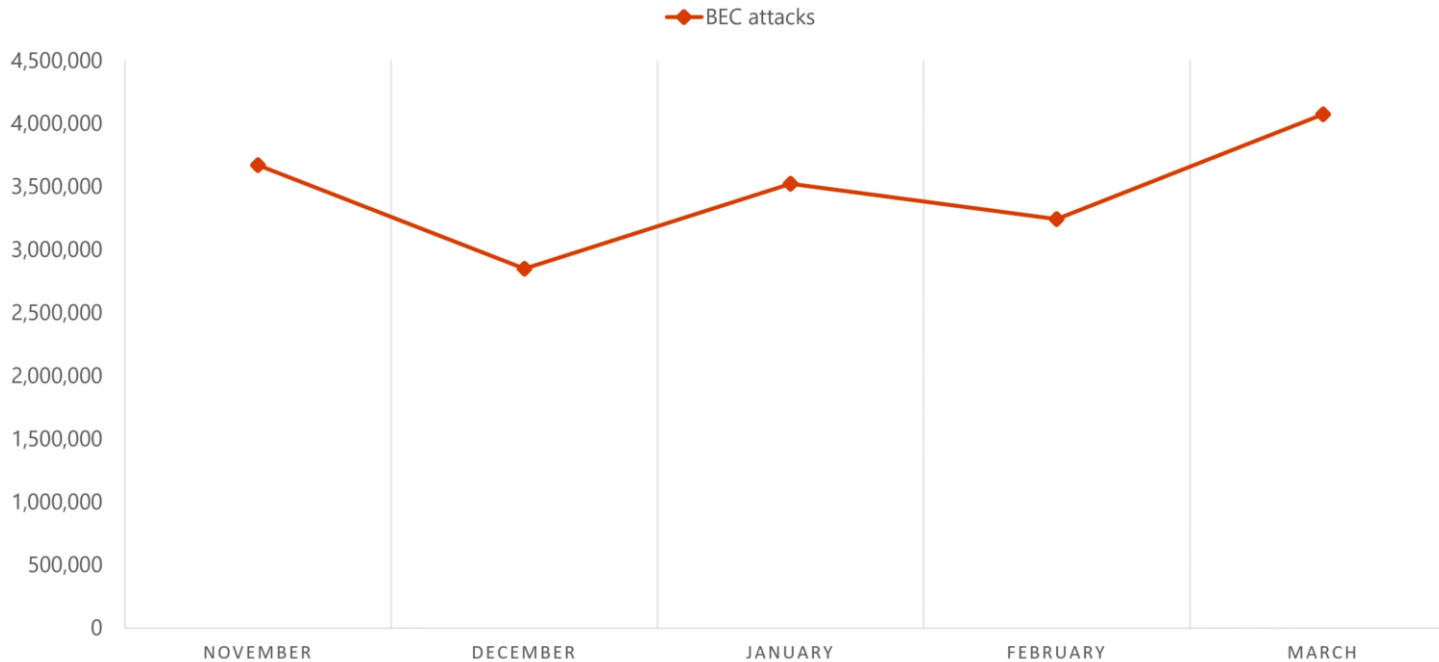

- Malicious email sent out, aimed at, but not limited to, information gathering.

This includes credit card information, login credentials, authentication tokens, Session cookies, information for orchestrating spear phishing attacks, more phishing attacks,...

Ok. Why Should I care?

BEC attack volume (November 2025 – March 2026)

- Microsoft defines business email compromise (BEC) as a text-based attack targeting enterprise users that impersonates a trusted entity for the purpose of persuading a recipient into initiating a fraudulent financial transaction or sending the threat actor sensitive documents.
- These attacks fluctuated across Q1, totaling approximately 10.7 million attacks: rising 24% in January, dipping 8% in February, then surging 26% in March.

Anhh. How can I spot one?

- Who is sending me this email?
- Is this really the company's domain?
- Is this a legit domain?
- Hover over the links
- Do I trust this link?
- Why should I enter my Microsoft credentials to claim a free trip to Dubai?

BE SKEPTICAL!!!

Can we analyze it further?

- Look at the RAW .eml file and parse through the data
- Check the RAW email content (I.O.C check on Threat Intel Feeds)
- Use these tools:
 - urlscan.io (scan the links and see the page)
 - VirusTotal.com (check the IPs, hashes scan and domain reputation)
 - centralOps.net (Check the domain reputation (more))
 - talosintelligence.com (Cisco Talos for IP, URL, domain, and hash scans)

Can we try it ourselves?

- Use the resources shared during the presentation
- Use the information on the handouts

BE SKEPTICAL!

What are we doing today?

- Today: we work through a TryHackMe room together
- [Tryhackme.com/room/phishingpond](https://tryhackme.com/room/phishingpond)

- Next session: a few core concepts, then some hands-on practice on CyLabs (prev. picoCTF)

Resources

- [TCM Security](#) try this first lots of free high qual content
- [HackTheBox Academy](#) most valuable IMO
- [pwn college](#) Great resource
- [hackersploit](#) more advanced but still good to read and watch
- [PortSwigger Academy](#) great for web app vulnerabilities
- [TryHackMe](#) Very beginner friendly
- [OpenClassroom](#) a lot of free courses well structured
- [101 Labs.net](#) Great to learn hands-on platform for practice in vm
